

# **Hydrophilic Foam Dressing**

Non-Adhesive

Hydrophilic Foam Dressing is a non-adhesive type of wound dressing that is designed to manage moderate to heavily exuding wounds. It is made of a soft and absorbent foam material that can handle large amounts of wound exudate, while maintaining a moist wound environment for optimal healing. The dressing does not have any adhesive layer, which makes it a good option for patients with sensitive or fragile skin. Hydrophilic Foam Dressing can be cut to the shape of the wound and easily secured in place with a secondary dressing or bandage. It is an ideal choice for wounds such as pressure ulcers, surgical wounds, and traumatic wounds.

**Hydrophilic Foam Dressing** provides reliable protection and cushioning for the wound, while minimizing pain and discomfort for the patient.

# ENHANCED PATIENT COMFORT

Foam dressings are designed to be highly absorbent, while still being gentle to the skin, with minimal skin stripping upon removal.

Not made with natural rubber latex.

### **Available Sizes:**

Products	Size	Reorder #	Units
Foam Dressing	2in x 2in	PCHF3007	10/Box, 40 Boxes/Case
Foam Dressing	4in x 4.3in	PCHF3008	10/Box, 40 Boxes/Case
Foam Dressing	6in x 6in	PCHF3009	10/Box, 20 Boxes/Case

### **Indications:**

A sterile primary dressing designed for a wide range of moderate to highly exuding wounds such as leg and foot ulcers, pressure ulcers and traumatic wounds, can be used for second degree burns, donor sites, postoperative wounds and skin abrasions.

#### **Features & Benefits:**

- Safe, easy to apply and remove, and can be sized to fit the wound
- Provides a balanced moisture environment to promote autolytic debridement
- Minimizes maceration and promotes healing with excellent exudate absorption
- Maintains a moist environment for optimal wound healing
- Minimizes pain and trauma during dressing change
- · Air and water permeable
